Reflection

- What worked well?
 - What worked well is the whole website itself, it only needed minor fixing but I prompted it to be fixed.
- What needed manual fixing?
 - I didn't manually fix it by coding but I did manually prompt to change the emoji to images in the programming language section.
- What did you learn about prompting?
 - What I learned about prompting is that if you want an expected output, you have to complete all the details in the prompt, and of course the output is not gonna be perfect so you have to prompt more to reach the expected output. I feel like a manager when prompted by AI.
